

## **Project: New Haven Urgent Care**

**Team#35**

**Test Case ID#:** 13

**Test Date:** 12/8/18

**Name(s) of Tester(s):**

Matthew Warns

**Test Description (What are you testing? – you must be specific):** This test accesses the medical information of each patient. The database does not have a field specifically for medications; it was grouped under the “medical information” field at intake. This is an error in the database. Consider a patient that visits and undergoes intake twice. If they leave a medication off of the intake form the second time, there is no way to know if they are no longer taking it or if they simply forgot. Medications could be stored as part of the patient entity instead of the visit entity in an attempt to fix this.

**NOTE:** The following information must be provided to be given credit for any test.

**Test Data (Provide the file name of the script used to insert data, provide a screen capture to reflect data, or provide script here):**

Patient\_meds.sql

**SQL Query(s) used for testing:**

SELECT Patient.Patient\_ID, Medical\_Info

FROM Patient, Intakes

WHERE Patient.Patient\_ID = Intakes.Patient\_ID
